Fulfill®

For Control of Certain Aphids on Alfalfa Grown for Seed

**EPA Reg. No. 100-912
EPA SLN No. ID-000010**

This label expires and must not be distributed or used in accordance with this SLN registration after December 31, 2019

DIRECTIONS FOR USE

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This label must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-registered label.
- **FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR WEED CONTROL, CROP INJURY, OR ILLEGAL RESIDUES.**

Fulfill is a selective insecticide for the control of certain aphid species in alfalfa grown for seed. Fulfill works primarily by ingestion, but also has some contact activity. Affected aphids stop feeding shortly after exposure, but may remain on the plant foliage until they die, which is usually within 2-7 days.

Aphid pests controlled by Fulfill include: green peach aphid, pea aphid, cabbage aphid, turnip aphid, and potato aphid.

Apply Fulfill at a rate of 2.75 oz/A when aphids first appear, before populations build to damaging levels. A second application may be made to manage persistent aphid populations.

Thorough spray coverage of plant foliage is essential for optimum control. Apply in sufficient water to ensure good coverage; use a minimum of 5 gals/A when applied by air and a minimum of 10 gals/A when applied by ground. The addition of a penetrating type spray adjuvant, at the manufacturer's suggested rate, is recommended to provide optimum coverage and penetration.

NOTES: DO NOT apply more than 2.75 oz/A per application. **DO NOT** exceed a total of 5.5 oz/A per crop per season. Allow a minimum of 7 days between applications. Allow 14 days (PHI) between the last application and harvest.

Bee statement: Fulfill is a highly selective insecticide, but is toxic to pollinating bees through oral and contact exposure. When the crop is in bloom, only apply Fulfill in the early morning (prior to 3 hours after sunrise) or late evening (later than 3 hours before sunset) when temperatures are cool and bees are not actively foraging.

Notes: (1) Seed from any treated crop on this label may not be used for human or animal consumption. (2) Alfalfa seed from treated fields may not be used for growing sprouts for humans or animal consumption. (3) Producers of alfalfa grown for seed that use this product, or cause the product to be used on fields they operate, are required to inform, in writing, conditioners receiving seed produced on fields treated with this product. A copy of this labeling is required to be provided to the conditioner by the producer. Processed seed must be labeled "Not for human or animal consumption" at the processing plant. The processor must dispose of all seed screenings in such a way that they cannot be distributed or used for food or feed.
