Stakeholders –

Thank you for your attendance and participation at the negotiated rules meeting on Wed. June 27. The attached documents are the 1999 and the 2013 version of the NRCS 590. The goal for the next negotiated rules meeting, scheduled for July 11, 2018 @ 1pm at the ISDA Boise office, will be to identify key parts in both versions of the 590 that are relevant, practical and achievable for Idaho's dairy industry so as to potentially create a new document to effectively serve as the dairy nutrient management standard. The information in these documents is scientific and technical in some areas, so please take your time and review both documents thoroughly and bring your suggestions on July 11 for which sections should be removed and which sections should be carried over. Attached also is the first draft of the "strawman". This is the working document that identifies new language as well as deleted language for the proposed rule. I have attempted to incorporate the requests and suggestions submitted by stakeholders for both the "dual phosphorus standard" petition and the "soil test margin of error" petition. The edits, thus far, are contained on pages 6 & 7. Please keep in mind the new language in this strawman is only a draft....nothing is set in stone. Please bring comments and suggestions for rule language to the meeting on July 11, as well. Thank you again for your time and efforts in this rulemaking. I hope to see everyone back on July 11.

Scott R. Leibsle DVM, DABVP
