		d Manufacture Grade A Milk and Milk Products shall comply with the provisions set- rporated by reference in this Subchapter A.	torth in the
1056 -	_ 119	(RESERVED)	

120. GRADE A MILK AND MILK PRODUCTS QUALITY STANDARDS.

The following standards are substituted for the bacterial limit standard and the somatic cell count standard for Grade

		milk products for pasteurized, ultra-pasteurization or aseptic processing in Section 7 of the Grade "A" ordinance.
	01. (Bacterial Limit Standard . The bacterial limit standard is eighty thousand (80,000) per mL.
per mL.	02.	Somatic Cell Count Standard . The somatic cell count standard is four hundred thousand (400,000)
somatic	03.	Out of State Milk. Milk from other states, if processed in Idaho, shall comply with the Idaho at standard.
121 2	209.	(RESERVED)
		SUBCHAPTER B – MILK AND CREAM PROCUREMENT AND TESTING
	ion to the	ITIONS. de definitions found in Chapters 3 and 5, Title 37, Idaho Code, the following definitions apply to the denforcement of Subchapter B only:
compon	01. nent or qu	Abnormal Test . A test result from a producer sample that is dissimilar from recent producer milk ality parameter testing results; an anomaly.
to deter	02. mine the	Accuracy Check. A test made at the beginning of each testing session and once per hour thereafter continued accuracy of the testing device.
compon	03. nents and	Approved Testing Methods . Methods approved by the director for testing milk or cream quality parameters when those components and parameters are used as a basis of payment.
results t	04. hat are w	Calibration. The settings established on a testing device that will result in an average number of ithin tolerance.
probatio	05. onary test	Clearance Test. A sample set issued to an official laboratory, by the Department, to maintain a ing license or reinstate a suspended testing license.
	06. (Control Samples . Milk samples used to determine or set the calibration of the testing device.
or solid	07. s-nonfat,	Component Testing. An analysis of milk or cream constituents including milkfat, protein, lactose which is used as a basis of payment.
for dete	08. rmining t	Detailed Pricing Description . The method used by the purchaser of milk or cream as the criteria the price paid.
		Milk Component or Component . A unique compound within milk whose relative mass within the d to determine the payment to producers. Component parts of milk include milkfat, protein, lactose mer solids, and total solids.
or quali		Official Laboratory . A facility, licensed by the department, that tests milk or cream components eters for the purpose of determining the value of the product when sold or purchased by producers or ()
sampla	11.	Outlier. A regulatory sample result that appears to deviate markedly from other members of the

12. Pay Records. Signed written or printed records, which itemize milk volume, milk compone quality parameters used as payment to a producer or other processor.	nt and
13. Performance Error. The difference between the known percentage content of each component in the control sample, as determined by the sample provider, and the percentage content as measure the testing device.	
14. Producer . A dairy farm permitted by the department to sell milk for human consumption.	(
15. Processor . A creamery, milk plant, shipping or cream buying station, milk condensing plant, of factory, mix making plant, ice cream factory, reprocessing plant, casein plant, powdered milk plant, or factory of products, or other person receiving or purchasing milk or cream in bulk other than a retail vendor of milk on the of volume, milk components, or milk quality.	of milk
16. Quality Parameter. The quality of milk or cream as determined by the bacteria/plate count m somatic cell count, temperature, drug residues or other parameters as approved by the department. (ethod,
17. Rolling Group of Thirteen (13). A series of thirteen (13) consecutive sample testing dates the lab performance error of each biweekly component test is averaged together to represent the long-term acc of the lab. To be considered a valid testing date, a lab must evaluate and provide results on no less than ni component samples from each round of testing.	curacy
18. Testing Device . The equipment used to determine the percentage of milk or cream compone (nts.
19. Sample Set. A group of not less than nine (9) milk samples issued by the Department to each of laboratory to evaluate component testing accuracy.	fficial
20. Tolerance . The acceptable performance error from the control values of each sample determined by the sample provider.	set as
211. – 219. (RESERVED)	
220. MILK AND CREAM PROCUREMENT AND TESTING REQUIREMENTS. All milk and cream produced, purchased or sold in the state of Idaho at a price based upon or determined milkfat, protein, lactose, solids-nonfat, somatic cell counts, or other quality parameters, shall comply wi requirements of Subchapter B.	•
221. LABORATORY LICENSING REQUIREMENTS.	
01. License Required . All laboratories that test milk or cream components and quality parameter a basis of payment must be licensed by the department as an official laboratory. (ers for
O2. License Application . A laboratory must apply for a license on a form prescribed by the depart The laboratory must identify (on the application form) the names of all persons who will test milk or components and quality parameters. (
03. License Fee. The license fee, per laboratory, is twenty-five dollars (\$25).)
04. License Term . The official laboratory license is valid for three (3) calendar years after issuar the department, unless otherwise suspended or revoked in accordance with these rules. The license expirence of the third year.	
222. – 229. (RESERVED)	

230.	OFFICIAL LABORATORIES - RESPONSIBILITIES AND OPERATING PROCEDURES.	
operate	01. Competency in Testing. Official laboratories are responsible for ensuring that employ testing devices are competent to operate the devices, and for conducting testing according to Subchar	
	()	pter B.
accura	0201. Facility Requirements . The areas in official laboratories where component or quality per is conducted shall be well lighted, kept clean, appropriately ventilated and sufficient in size to protect testing. Laboratories that are certified under the Grade A program set forth in Subchapter B are defined the facility requirements for an official laboratory.	ovide for
-	03. Operating Procedures. An official laboratory shall establish and follow written standard dures consistent with the recommended procedures for operation and maintenance set forth by the man testing device.	
Procur	Third Party Laboratories. The Party Laboratories of the procure of the procurer are not recovered by the pr	sponsible
232 231	<u>1</u> . – 2 39 <u>40</u> . (RESERVED)

01.	Daily Performance Check Samples. ()
approved by	Source. A set of daily performance check samples must be obtained from a sample provide the department, or may be made by the official laboratory. (Number Unless otherwise gracified by the granufacturer of the testing davies a principum of two)
	Number. Unless otherwise specified by the manufacturer of the testing device, a minimum of two nilk samples must be analyzed before daily component testing begins.	0
	Requirements. The control samples must comply with the requirements set forth in Section 241-3 and fall within the component ranges typically found in the samples to be tested.)∫ _
	Procedure. To conduct a daily performance check, the official laboratory must test a set of daicheck samples. Based on the daily performance check, the official laboratory must do the following: ———————————————————————————————————	y
	Determine the performance error of the testing device with respect to each daily performance checoperformance error is the difference between the known percentage content of each milk component as determined by the sample provider, and the percentage content as measured by the testing device; ar	in
	Calculate the mean difference for the set of daily performance check samples. The mean difference the performance errors for the individual samples, divided by the number of samples in the set.	
four thousai	1. Calibration Based On Daily Performance Check. If the mean difference calculated on a dair check exceeds plus or minus forty-four thousandths percent (.044%) for milkfat or protein, or eight adths percent (.084%) for total solids or solids-nonfat, the testing device shall not be used until it in accordance with Section 241.	y-

243. ACCURACY CHECKS.

All testing devices shall be subjected to daily and hourly accuracy checks in accordance with the protocols set by the

testing device manufacturer, or as set forth in this Section of Subchapter B.	()
01. Daily Accuracy Check. A daily accuracy check must be conducted for component before each day's testing at the same time that the daily performance check is conducted for component before each day's testing at the same time that the daily performance check is conducted for component before each day's testing at the same time that the daily performance check is conducted for component before each day's testing at the same time that the daily performance check is conducted for component before each day's testing at the same time that the daily performance check is conducted for component before each day's testing at the same time that the daily performance check is conducted for component before each day's testing at the same time that the daily performance check is conducted for component before each day's testing at the same time that the daily performance check is conducted for component before each day's testing at the same time that the daily performance check is conducted for conducted fo	onducted. The official
laboratory must perform ten (10) tests on a reference sample. The reference sample may be sample prepared by the official laboratory, or it may be a daily performance check sample obtain the control of	ined from an approved
sample provider. The ten (10) test results must be averaged, and the average result will be used for the hourly accuracy checks required in Subsection 243.02.	as a comparison value
02. Hourly Accuracy Check. An hourly accuracy check must be conducted for before each hour's testing for that component.	each milk component
a. To conduct an hourly accuracy check, the official laboratory must test the sused for the daily accuracy check.	same reference sample
b. For each relevant milk component, the hourly accuracy check result mus	it he compared to the
average result obtained on the daily reference check under Subsection 243.01. If an hourly differs from the average result on the daily accuracy check by more than thirty four thousandtl milkfat or protein, or sixty four thousandths percent (.064%) for total solids or solids nonfat, the not be used until the condition causing the difference is found and corrected.	accuracy check result hs percent (.034%) for
e. Test results obtained before the device is corrected, and subsequent to the last accuracy check, must not be used in determining the amount paid to milk producers.	t previous conforming
244 <u>243</u> . – 249. (RESERVED)	
250. SAMPLE INTEGRITY. Milk or cream samples must be handled, stored, and shipped in a manner that maintains the interpretation Samples must be maintained in a temperature range of thirty-three degrees (33°) to forty-five degree (zero point fifty-five hundredths degrees (0.55°) to seven point twenty-two hundredths degrees)	grees (45°) Fahrenheit
251 259. (RESERVED)	
260. ABNORMAL TESTS. Whenever an abnormal test occurs on a producer's sample, that result may not be used as a bas)	sis of payment. (
01. Alternate Tests . In the case of an abnormal test, the official laboratory will previous three (3) tests from that producer or another department approved method.	use an average of the
02. Accidents and Sampling Errors . Laboratory accidents or sampling errors of tested will not be used as official results and the criteria in Subsection 260.01 will be instituted.	
Documentation. All abnormal tests must be documented by the person cond	ucting the test. (

310. DEFINITIONS. In addition to the definitions found in Chapters 3, 4, and 5, Title 37, Idaho Code, the following definitions apply to the interpretation and enforcement of Subchapter C only:
01. 3-A Sanitary Standards . The standards for dairy equipment formulated by the 3-A Sanitary Standards, Inc. (3-A SSI). 3-A SSI is comprised of equipment fabricators, Dairy Processors, and regulatory sanitarians which include state milk regulatory officials, USDA Agricultural Marketing Service Dairy Programs, the US. Public Health Service, the Food and Drug Administration, academic representatives, and others.
02. Acceptable Milk. Milk that qualifies as to appearance and odor and that is classified No. 1 or No 2 for sediment content.
03 Adulterated Milk. Weakened or lessened in purity by the addition of a foreign or inferior substance or element rendering the milk unsuitable for human consumption.
0304. Atmosphere Relatively Free From Mold . No more than ten (10) mold colonies per cubic foot o air as determined in Standard Methods.
0405. Bulk Milk Hauler or Bulk Milk Sampler . A person licensed by the Department who is qualified and trained for the grading or sampling of raw milk in accordance with the quality standards and procedures of these rules and the Universal Sample.
0506. C-I-P or Cleaned-in-Place . The procedure by which sanitary pipelines or pieces of dairy equipment are mechanically cleaned in place by circulation.
9607. Commingled Milk . Milk that has left the Dairy Farm and has been mixed with other individual Producer milk in a Transportation Tank or at a Dairy Plant.
0708. Dairy Farm or Farm. A place or premise certified by the Department where one (1) or more milking cows, sheep, goats, or water buffalo are kept, and from which all or a portion of the milk produced thereon is delivered, sold, or offered for sale to a Dairy Plant.
0809. Dairy Certification . Certification by an Inspector or Approved Fieldman that a Producer's herd milking facility and housing, milking procedure, cooling, milkhouse or milkroom, utensils and equipment and wate supply have been found to meet the applicable requirements of Section 360 for the production of milk to be used fo manufacturing purposes.
0910. Dairy Plant or Dairy Processor . Any place, premise, or establishment licensed by the Departmen where milk or dairy products are transported, graded, received or handled for processing or manufacturing and/o prepared for distribution.
1011. Dairy Products. Butter, cheese (natural or processed), dry whole milk, nonfat dry milk, dry buttermilk, dry whey, evaporated milk (whole or skim), condensed whole milk and condensed skim milk (plain or sweetened), and such other products, for human consumption, as may be otherwise designated.

- 4112. Excluded Milk. All of a Producer's milk excluded from the market by the provisions of Section 341.
- 1213. Farm Tank. A tank used to cool, store or cool, and store milk prior to transportation to the processing plant. (
- 1314. Fieldman. A person qualified and trained in the sanitary methods of production and handling of milk as set forth herein, and generally employed by a Dairy Plant for the purpose of making Dairy Farm surveys and doing quality control work.
 - 1415. Fieldman, Approved. A Fieldman qualified, trained, and approved by the Department to perform

	0605	Acceptance or Rejection of Milk If the sediment disc is classified as No. 1. No. 2.	vr No. 3 +1	10

9605. Acceptance or Rejection of Milk. If the sediment disc is classified as No. 1, No. 2, or No. 3, the Producer's milk may be accepted. If the sediment disc is classified No. 4 the milk shall be rejected: provided, that if the shipment of milk is commingled with other milk in a Transport Tank the next shipment shall not be accepted until

its quality has been determined at the Dairy Farm before being picked up; however, if the person making the test is unable to get to the farm before the next shipment it may be accepted but no further shipments shall be accepted unless the milk meets the requirements of No. 3 or better. In the case of milk classified as No. 3 or No. 4, if in cans, all cans shall be tested. Producers in No. 3 or No. 4 (milk cans or bulk) shall be notified immediately, and furnished applicable sediment discs and the next shipment will be tested. Retests. On test of the next shipment (if in cans, all cans shall be tested) milk classified as No. 1, No. 2, or No. 3, may be accepted, but No. 4 milk shall be rejected. Retests of bulk milk classified as No. 4 shall be made at the Dairy Farm before pickup. The Producers of No. 3 or No. 4 milk shall be notified immediately, furnished applicable sediment discs and the next shipment tested. This procedure of retesting successive shipments and accepting probational (No. 3) milk and rejecting No. 4 milk may be continued for not to exceed ten (10) calendar days. If at the end of this time all of the Producer's milk does not meet the acceptable sediment content classification (No. 1 or No. 2) the milk shall be excluded from market. 322. -- 329. (RESERVED) 330. BACTERIAL ESTIMATE CLASSIFICATION. A laboratory examination to determine the bacterial estimate shall be made on each Producer's milk at least once each month at irregular intervals. Samples shall be analyzed at a laboratory approved by the Department. Methods of Testing. Milk shall be tested for bacterial estimate by using one (1) of the following methods or any other a method approved by Standard Methods or a test approved by the Department: BactoScan FC. Direct microscopic clump count. Standard plate count. Plate loop count. Petrifilm aerobic count. Bacterial Estimate Procedures. Whenever the bacterial estimate indicates the presence of more than two hundred thousand (200,000) bacteria per milliliter, the following procedures shall be applied: The Producer will be notified with a warning of the excessive bacterial estimate.) a. Whenever two (2) of the last four (4) consecutive bacterial estimates exceed two hundred thousand (200,000) per milliliter, the Department shall be notified and a written warning notice given to the Producer. The notice is in effect so long as two (2) of the last four (4) consecutive samples exceed two hundred thousand (200,000) per milliliter. An additional sample will be taken after a lapse of between three (3) days but within and twenty one (21) days of after the date of the written notice. notice required in Subsection 330.02.b. If this sample also exceeds two hundred thousand (200,000) per milliliter, Ssubsequent milkings shall be excluded from the market until satisfactory

c. An additional sample will be taken after a lapse of between three (3) days but within and twenty one (21) days of after the date of the written notice.notice required in Subsection 330.02.b. If this sample also exceeds two hundred thousand (200,000) per milliliter, Subsequent milkings shall be excluded from the market until satisfactory compliance is obtained the bacterial estimate of the sample is less than two hundred thousand (200,000) per milliliter. Shipment may be resumed and a temporary status assigned to the Producer by the Department when an additional sample of herd milk is tested and found satisfactory. The Producer will be assigned a fully reinstatement reinstated status when three (3) out of four (4) consecutive bacterial estimate tests do not exceed two hundred thousand (200,000) per milliliter.

331. -- 339. (RESERVED)

340. REJECTED MILK. A plant shall reject specific milk from a Producer if the milk fails to meet the requirements for appearance and odd if it is classified No. 4 for sediment content, or if it tests positive for drug residue. All reject milk shall be identified with a reject tag and/or colored with harmless food coloring.	
341. EXCLUDED MILK. A Dairy Plant shall not accept milk from a Producer if: ()
01. Probational Sediment Content . The milk has been in a probational (No. 3) sediment conte classification for more than ten (10) calendar days.	nt)
02. Exceeding Maximum Bacteria. Three (3) of the last five (5) milk samples have exceeded the maximum bacteria estimate of two hundred thousand (200,000) per milliliter.	he)
03. Insanitary Conditions . If the milk is produced in unclean conditions such as, but not limited t unclean milk contact surfaces, unclean conditions in the parlor or milk room, poor milking procedures, or poor anim housing conditions.	
04. Maximum Somatic Cell Count . Three (3) of the last five (5) milk samples have exceeded the maximum somatic cell count level of seven hundred fifty thousand (750,000) per milliliter or one million five hundred thousand (1,5000,000) per milliliter for goat or sheep milk.	
05. Positive Drug Test . The Producer's milk shipments to either the Grade A or the manufacturing grade milk market currently are not permitted due to a positive drug residue test.	1g)
342 349. (RESERVED)	
350. RECORDS OF TESTS. Accurate records of the results of the milk quality and drug residue tests for each Producer shall be kept on file for period of not less than twelve (12) months. The records shall be available for examination by the Department.	· a
351. SOMATIC CELL COUNT.	
01. Level of Somatic Cells. A laboratory examination to determine the level of somatic cells shall be made on each Producer's milk at least four (4) times in each six (6) month period at irregular intervals. Samples shall be analyzed at a laboratory and by a method approved by the Department.	
02. Procedures . Whenever the confirmatory somatic cell count indicates the presence of more that seven hundred fifty thousand (750,000) somatic cells per milliliter, (one million five hundred thousand (1, $\underline{5}$ 000,000 per milliliter for goat and sheep) the following procedures shall be applied:	
a. The producer will be notified with a warning of the excessive somatic cell count. ()
b. Whenever two (2) of the last four (4) consecutive somatic cell counts exceed seven hundred fift thousand (750,000) per milliliter, (one million <u>five hundred thousand (1,500,000)</u> (1,000,000) per milliliter for go and sheep) the Department shall be notified and a written warning notice given to the Producer. The notice will be effect so long as two (2) of the last four (4) consecutive samples exceed seven hundred fifty thousand (750,000) p milliliter, (one million <u>five hundred thousand (1,500,000)</u> (1,000,000) per milliliter for goat and sheep). (at in
c. An additional sample shall be taken between three (3) days and twenty one (21) days after the da of the written notice after a lapse of three (3) days but within twenty one (21) days of the notice required in Subsection	

351.02.b. If this sample also exceeds seven hundred fifty thousand (750,000) per milliliter, (one million (1,000,000) per milliliter for goat and sheep) subsequent Subsequent milkings shall be excluded from the market until satisfactory compliance is obtained the somatic cell count of the sample is less than seven hundred fifty thousand (750,000) per

milliliter, (one million five hundred thousand (1,500,000) per milliliter for goat and sheep). Shipment may be resumed and a temporary status assigned to the producer by the Department when an additional sample of herd milk is tested and found satisfactory. The Producer will be assigned a fully reinstatement-reinstated status when three (3) out of four (4) consecutive somatic cell count tests do not exceed seven hundred fifty thousand (750,000) per milliliter, (one million five hundred thousand (1.500,000) (1.000,000) per milliliter for goat and sheep). 352. DRUG RESIDUE LEVEL. Dairy Plant's Sampling and Testing Responsibilities. All milk shipped for processing or intended to be processed on the Dairy Farm where it was produced will be sampled and tested, prior to processing, for beta lactam drug residue or other drugs as determined by the Department. Collection, handling and testing of samples shall be done according to procedures established by the Department. When so specified by the US. Food and Drug Administration (FDA), all milk shipped for processing, or intended to be processed on the Dairy Farm where it was produced, will be sampled and tested, prior to processing, for other drug residues under a random drug sampling program. A random drug sampling program may be conducted at a frequency determined by the Department.(When the Commissioner of the FDA determines that a potential problem exists with an animal drug residue or other contaminant in the milk supply, a sampling and testing program will be conducted, as determined by the FDA.) Dairy Plants shall analyze samples for beta lactams and other drug residues by methods evaluated by OMA and accepted by the FDA as effective in determining compliance with established "safe levels" or tolerances. "Safe levels" and tolerances for particular drugs are established and amended by the FDA. d. Individual Producer sampling. Bulk Milk. A milk sample for beta lactam drug residue testing shall be taken at each farm and will include milk from each Dairy Farm Tank. Can Milk. A milk sample for beta lactam drug residue testing shall be performed separately at the receiving Dairy Plant for each can milk Producer included in a delivery, and be representative of all milk received from the Producer. Producer Dairy Plant. For those Producers who also have a licensed Dairy Plant, a milk sample for beta lactam drug residue testing shall be performed on each batch of milk to be processed. Load sampling and testing. e.) Bulk milk. A load sample shall be taken from the Transport Tank after its arrival at the Dairy Plant and prior to further commingling. Can milk. A load sample representing all of the milk received on a shipment shall be formed at the plant, using a sampling procedure that includes milk from every can on the vehicle. Producer Dairy Plant. A load sample shall be tested at the Dairy Plant using a sampling procedure that includes all milk produced and received. Sample and record retention. A load sample that tests positive for drug residue shall be retained according to guidelines established by the Department. The records of all sample test results shall be retained for a period of not less than twelve (12) months. Dairy Plant follow-up.

When a load sample or individual Producer sample tests positive for drug residue, Dairy Plant

personnel shall notify the Department immediately, of the positive test result and of the intended disposition of the shipment of milk containing the drug residue. All milk testing positive for drug residue shall be disposed of in a manner that removes it from the human or animal food chain, except when acceptably reconditioned under FDA compliance policy guidelines. ii. Each individual Producer sample represented in the positive-testing load sample shall be individually tested as directed by the Department to determine the Producer of the milk sample testing positive for drug residue. Identification of the Producer responsible for producing the milk testing positive for drug residue, and details of the final disposition of the shipment of milk containing the drug residue, shall be reported immediately to the Department. Milk shipment from the Producer identified as the source of milk testing positive for drug residue shall cease immediately and may resume only after a sample from a subsequent milking does not test positive for drug residue. Department's Monitoring and Surveillance Responsibilities. The Department will monitor the Dairy Plant's drug residue program by conducting unannounced on-site inspections to observe testing and sampling procedures and to collect samples for comparison drug residue testing. In addition, the Department will review industry records for compliance with these rules. The review will seek to determine that: Each Producer is included in a routine, effective drug residue milk monitoring program utilizing AOAC evaluated and FDA-approved methods to test samples for the presence of drug residue; The Department receives prompt notification from industry personnel of each occurrence of a sample testing positive for drug residue, and of the identity of each Producer identified as a source of milk testing positive for drug residue; The Department receives prompt notification from industry personnel of the intended and final disposition of milk testing positive for drug residue, and that disposal of the load is conducted in a manner that removes it from the human or animal food chain, except when acceptably reconditioned under FDA compliance policy guidelines; and () Milk shipment from a Producer identified as a source of milk testing positive for drug residue completely and immediately ceases until a milk sample taken from the dairy herd does not test positive for drug residue. (**Enforcement**. If a Producer ships milk testing positive for drug residue three (3) times within a 03. twelve (12) month period, the Department may initiate procedures to suspend the Producer's milk shipping privileges. Radionuclides. Composite milk samples from selected areas within in the state of Idaho should be tested for biologically significant radionuclides at a frequency which the FDA determines to be adequate to protect the consumer. 354. Pesticides And Herbicides. Composite milk samples should be tested for pesticides and herbicides at a frequency the FDA determines is adequate to protect the consumer. The test results from the samples shall not exceed established FDA limits. (

355. ADDED WATER.

Milk samples from each Producer should be tested for added water at a frequency the Department determines is adequate to prevent the addition of water to the milk.

1002 Qualifications for Dainy Form Contification Dainy Form contification requires satisfactory
1003. Qualifications for Dairy Farm Certification. Dairy Farm certification requires satisfactory
compliance with the requirements in Section 370.
361 369. (RESERVED)
370. DAIRY FARM CERTIFICATION PERMIT.
No milk for manufacturing purposes produced on an uncertified Dairy Farm shall be bought or sold for human
consumption. <u>Inspections shall be conducted pursuant to the 2019 Pasteurized Milk Ordinance.</u> ()
inspections share be conducted pursuant to the 2017 Lasteurized wink Ordinance.
01. Initial Inspection. Certified Dairy Farms shall be inspected at least annually after initial
certification to determine eligibility for recertification. The inspection criteria for recertification is the same as that for
initial certification. ()
02. Inspection. Each Dairy Farm shall be inspected by an Inspector or Approved Fieldman. When
evidence indicates that it is advisable to do so, the Department may require an examination of the herd by a licensed
veterinarian. If the Dairy Farm meets the applicable requirements for Dairy Farm certification described in Section
360, as indicated by the Farm Certification Report Form, the Dairy Farm shall be certified as described in Subsection
370.03. If the Dairy Farm does not meet the requirements for certification, the Dairy Farm shall be reinspected within
thirty (30) days after the initial inspection. If the Dairy Farm then meets the requirements for certification, the Dairy
Farm shall be certified. If the Dairy Farm does not meet the requirements for certification, the Dairy Farm shall not
be certified, and the Producer's authorization to sell milk for human consumption from that Dairy Farm will be
withheld by the Department until such time as the Dairy Farm qualifies for certification. Repeat violations on any item
may cause a Dairy Farm to lose certification. Provided that, if the Inspector determines during any of these inspections
that corrections on the Dairy Farm will require some capital investment, a reasonable extension of the prescribed time
limits may be granted by the Department. (
03. Certification. An Inspector or Approved Fieldman will certify Dairy Farms that meet the
requirements of Section 360, as applicable, based upon the inspection criteria described in Subsection 370.02. The
scoring criteria approved by the Department will be utilized in determining compliance with the provisions of Section
360. Dairy Farm certification shall authorize the sale from that Dairy Farm of milk for manufacturing purposes that
meets the quality standards. ()
Q4. Probationary Period. If at any time an Inspector or Approved Fieldman determines that a certified
Dairy Farm does not meet the requirements for certification, the Department may allow a reasonable probationary
period for the Producer to bring the Dairy Farm within the requirements for certification. If at the end of this time the
Dairy Farm does not meet the requirements for certification, the Department may revoke the Dairy Farm certification.
Zam, Tama acts not interest and requirements for certained on, the Department may review the Daily Turin certained on.
