

# FIFRA 24(c) Special Local Need Label (SLN)

For distribution and use only in the state of Idaho

For use on Alfalfa Grown for Seed for control of Plant bugs (*Lygus* sp.),  
Alfalfa Weevil and Spotted Alfalfa Aphid

## CORMORAN™

For Agricultural or Commercial Use Only

EPA Reg. No. 66222-264

SLN No. ID-170002

This label expires and must not be distributed or used in accordance with this SLN registration after December 31, 2025

ACTIVE INGREDIENTS:	% BY WT.
Novaluron .....	9.1%
Acetamiprid .....	7.3%
OTHER INGREDIENTS: .....	83.6%
TOTAL:	100.0%

**KEEP OUT OF REACH OF CHILDREN**

**CAUTION/PRECAUTION**

### Directions for Use

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This state-specific Section 24(c) labeling and federal label for this product must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, and precautions on the EPA registered label for EPA Reg. No. 66222-264.
- Do not apply this product through any type of irrigation system.

CROP	Insect	RATE OF APPLICATION
Alfalfa Grown for Seed	Plant Bugs ( <i>Lygus</i> sp.) Aphids (including Blue Alfalfa Aphid, Cowpea Aphid, Pea Aphid, Spotted Alfalfa Aphid) Alfalfa Weevil (suppression)	9.0 – 12.0 fl oz per acre

#### APPLICATION RATE:

Make application at the rate of 9.0 – 12.0 fl oz per acre. Make applications only in accordance with directions and conditions of use described in the EPA registered Cormoran™ label.

#### METHOD OF APPLICATION:

Cormoran™ may be applied in a minimum of 15 gallons of spray solution per acre by ground sprayer or in a minimum of 5 gallons of spray solution per acre by aircraft spray equipment. Check equipment calibration frequently. Complete coverage and uniform application are essential for the most effective results, especially when lower spray volumes are applied. If necessary, increase the spray volume per acre for complete crop coverage.

#### TIMING/FREQUENCY OF APPLICATION:

Repeat applications if needed to maintain control, but do not make applications less than 7 days apart.

**SPECIFIC USE RESTRICTIONS:**

- Preharvest interval of 14 days
- Do not apply more than 0.23 lb Novaluron active ingredient containing products per acre per season.
- Do not apply more than 0.3 lb Acetamiprid active ingredient containing products per acre per season.
- Do not apply more than 36.0 fl oz of formulated product per acre per season.

Note: No portion of this alfalfa seed crop may be used or distributed for human food or animal feed purposes.

**Special Crop Use Restrictions:**

The pesticide applicator, the producer of the crop, and the seed conditioner must be aware that use of this product according to this labeling is deemed a non-feed/non-food use. If the applicator of this pesticide is not the producer, the applicator must provide a copy of this labeling to the producer of the crop. Producers of this crop who use this product, or cause the product to be used on a field they operate, must provide a copy of this pesticide label to the seed conditioner.

This pesticide does not have established pesticide residue tolerances for this crop. Consequently, no portion of this crop may be used or distributed for human consumption or animal feed. This restriction pertains to, but is not limited to: green chop, forage, hay, pellets, meal, whole seed, cracked seed, straw, roots, bulbs, foliage, or seed screenings, and the grazing of the crop field, stubble or regrowth. All seed screenings shall be disposed of in such a manner that screenings cannot be distributed or used for food or feed purposes. All restrictions listed in the Idaho Rules Governing Pesticide & Chemigation Use & Application, IDAPA 02.03.03.450 must be followed.

Any seed from a field treated with this pesticide product shall bear specific and conspicuous container labeling, or if shipped in bulk, on the shipment invoice or bill of lading. The labeling shall contain the following statement:

“This seed was produced using one or more products for which the United States Environmental Protection Agency has not established pesticide residue tolerances. This seed, in whole, as sprouts, or in any form, may not be used for human consumption or animal feed. Failure to comply with this condition may violate requirements of the Federal Food and Drug Administration and other regulatory agencies.”

**ENVIRONMENTAL HAZARDS**

This pesticide is toxic to birds and aquatic invertebrates. This product is toxic to bees exposed to direct treatment (see POLLINATOR PROTECTION). Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

Do not contaminate water when disposing of equipment washwater or rinsate. Do not contaminate water used for irrigation or domestic purposes. This product may contaminate water through drift of spray in wind. This product has a potential for runoff for several days to weeks after application. Poorly draining soil with shallow water tables is more prone to produce runoff. A level, well maintained vegetative (grass) buffer strip between areas to which this product is applied and the surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours. Sound erosion control practices will reduce this product's contribution to surface water contamination.

**POLLINATOR PROTECTION**

Because of its mode of action as an insect growth regulator, and since it is not systemic, Cormoran has the potential to impact larval bees (i.e., brood). In order to minimize the possibility of effects to bee brood, do not use Cormoran on blooming crops when bees are actively foraging.

## AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

**Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.** PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls
- Chemical-resistant gloves, such as barrier laminate or butyl rubber > 14 mils or neoprene rubber > 14 mils or polyvinyl chloride > 14 mils or Viton > 14 mils
- Shoes plus socks
- Protective eyewear
