2023 Hop Production Up 2 Percent From Last Year

Production for Idaho, Oregon, and Washington in 2023 totaled 104 million pounds, up 2 percent from the 2022 crop of 102 million pounds. Combined area harvested for Idaho, Oregon, and Washington in 2023 totaled 54,318 acres, down 10 percent from the previous year. Harvested acreage decreased in Oregon, Idaho and Washington. The United States hop yield, at 1,915 pounds per acre, is up 221 pounds from a year ago.

Washington produced 74 percent of the United States hop crop for 2023; while Idaho accounted for 16 percent and Oregon accounted for 10 percent. In Washington, Columbus/Tomahawk^R/Zeus, Citra^R, Mosaic^R, Cascade, and Simcoe^R were the five leading varieties, accounting for 46 percent of the State's hop production. In Idaho, Columbus/Tomahawk^R/Zeus, Mosaic^R, Citra^R, Cascade, and Eureka!TM were the major varieties, accounting for 58 percent of the State's hop production. In Oregon, Citra^R, Mosaic^R, StrataTM, Cascade, and Nugget were the major varieties, accounting for 64 percent of the State's hop production.

The 2023 value of production for the United States totaled \$562 million, down 9 percent from the previous year.

¹ Includes data withheld to avoid disclosure of individual operations and varieties not listed.

² Includes 634 acres of organic hops for 2023 with yield equal to 1,679 pounds per acre and production at 1,064,700 pounds.

Statistical Methodology

Survey Procedures: Grower surveys are conducted in the three estimating States to collect acreage, production, and price data from growers.

Estimating Procedures: Information obtained from the hops growers surveys are used to establish estimates of hops. These estimates are reviewed for errors, reasonableness, and consistency with historical estimates and industry check data.

Revision Policy: All hop estimates are subject to revision the following year based on a thorough review of all available data.

Reliability: Survey results are subject to non-sampling errors such as omission, duplication, imputation for missing data, and mistakes in reporting, recording, and processing the data. These errors cannot be measured directly, but are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.
