September 3, 1985

TO: All Service Companies of
Electronic Weighing Devices
Weights & Measures Officers

FROM: Lyman D. Holloway, Chief
Bureau of Weights & Measures

SUBJECT: Security Sealing of Adjustable
Components on Electronic Devices

A handwritten signature in cursive script that reads "Lyman D. Holloway".

In October, 1983, a directive was issued identifying Scale Code 5.1.8. in HB 44 stating that a lead and wire seal must be used as the security sealing of these devices.

Whereas, a subsequent interpretation of this code's wording, it is permissible to use an adhesive pressure seal of the service company design, or approval pressure seal used by the Weights & Measures Officers, which would identify unauthorized removal and/or adjustments to any components affecting the performance of the device.
